

## AZUD HELIX AUTOMATIC FT4DCL SW DLP Filtration Equipment

The filtration equipment is included in **AZUD HELIX AUTOMATIC FT4DCL SW DLP SERIE**. It integrates 4" self-cleaning disc filters with the AZUD HELIX system. The filtration element is easily removable without tools. The housing is made of reinforced technical plastic; it has grooved connections and one 3" three-way hydraulic valve per filter. The equipment is specifically designed to optimize the filtration in **installations with aggressive conditions** such as the corrosive exposition to brackish water. They are supplied completely assembled through the necessary grooved couplings to the corresponding inlet, outlet and drainage manifolds; all of them made of high density polyethylene (HDPE).

**AZUD HELIX AUTOMATIC DLP** allows the reduction of the energetic use of the filtration installations, increasing their performance and requiring a minimum consumption of pressure and flow rate on each backflushing cycle in order to keep a maximum efficiency in a wide range of filtration degrees.

Furthermore, with the patented AZUD HELIX system, the frequency and intensity of the maintenance labours of the system are minimized. The energetic cost is dramatically reduced per filtered cubic meter within the installation, thus minimizing the environmental impact.

Represented equipment: AZUD HELIX AUTOMATIC FT4DCL5/8FX SW DLP

## Detailed description of the Filtration equipment

---

The offered Filtration equipment is composed by different elements:

▪ AZUD HELIX AUTOMATIC FT 4S SW DLP Filter characterized by:

- Housing with 4" grooved connection, produced of reinforced technical plastic (Fibreglass reinforced polyamide 6).
- Lock system, composed by a clamp made of AISI 316L stainless steel and NBR sealing gasket, placed in the housing of the filter.
- Two SW DLP filtration elements, completely independent, easily removable, without tools, to eventual maintenance labours. There is no possibility of mixture or interferences of flows during the backflushing process, due to the lid that makes them completely independent.
- Each filtration element is made by a stack of technical plastic discs, with a wide filtration surface, guaranteeing the in-depth filtration. The filtering surface of each filtration element is of 1620 cm<sup>2</sup> / 251 in<sup>2</sup>, so the total filtering surface of the filter is of 3240 cm<sup>2</sup> / 502 in<sup>2</sup>.
- AZUD HELIX. In the base of each stack of discs there is a device which generates a centrifugal helical movement that moves away the particles from the discs, hence it slows the clogging of the filters. The AZUD HELIX patented by AZUD, optimises the performance and minimizes the frequency and intensity of the maintenance labours of the system.

▪ Manifolds of the FT4DCL SW DLP filtration equipment:

- Inlet manifold 6" – 12" diameter. Made of High Density Polyethylene (HDPE) PE-100 UNE 53966. Flange connection elements or grooved depending on the model. It incorporates grooved derivations, required to connect the inlet manifold to the three-way valves.
- Outlet manifold 6" – 12" diameter made of High Density Polyethylene (HDPE) PE-100 UNE 53966. Flange connection elements or grooved depending on the model. It incorporates grooved derivations, required to connect the outlet manifold to the AZUD HELIX AUTOMATIC filters.
- Drainage manifold diameter of 4", made of High Density Polyethylene (HDPE) PE-100 UNE 53966. Grooved connection elements and / or solvent socket. It incorporates grooved derivations to connect the three-way valves to the drainage manifold.

*Remark:* All flange connections are available in DIN 2576 or ANSI B16.5 class 150 covered by a polypropylene layer.

▪ Supports of the equipment characterized by:

- Structure made of stainless steel with epoxy-polyester cover.

▪ Three-way hydraulic valve, characterized by:

- One three-way hydraulic valve per filter, 3" grooved connection, produced with reinforced technical plastic, with internal components of DUPLEX stainless steel. Diaphragm made of reinforced nylon (NR-AL52) and NBR gaskets.

▪ Triple-effect air release, characterized by:

- Housing made of technical plastic, drainage and inclusion of large volumes of air systems. 2" BSP connection male thread.

▪ Grooved couplings characterized by:

- Technical plastic grooved couplings which allow the connection of all the components of the filter.

Likewise, in the installation it is necessary to have compressed air intakes at a pressure of 6 bar for the pneumatic command of the three-way valves.

The equipment is supplied completely ready to its later automation.

**AZUD** equipment are made fulfilling the requirements of our Quality and Environmental System (**SICMA**), focused to keep the highest quality level according to **ISO 9001** Standard specifications and keeping its Environmental compromise according to **ISO 14001** standard.

**SICMA** (Quality & Environmental System) is audited and certified by the Spanish Association for Standardization & Certification (**AENOR**).

## General Technical Data

WORKING CONDITIONS	
Max. Working pressure	10 bar / 145 psi
Max. recommended pressure	8 bar / 116 psi
Min. Working pressure	0.8 bar / 11.6 psi
Required neumatic pressure	1 bar greater than the hydraulic pressure
Max. Temperature	60 °C / 140 °F
pH range	4 – 11

BACKFLUSHING PROCESS		
Min. Backflushing pressure	MG*	1.5 bar 22 psi
	WS*	1.5 bar 22 psi
Backflushing flow rate per filter	MG	5 l/s 80 gpm
	WS	5 l/s 80 gpm

\*MG filtration degrees: 400- 200- 130- 100 micron. WS filtration degrees: 130- 100- 50- 20- 10- 5 micron.

Diameter of 4" – 110 mm for drainage manifold with grooved connection and/or solvent socket.

\*Control Unit is not included with the filtration equipment.

\* Certain filtration equipment are not available in low filtration degrees.

- FT4DCL3: are not available in 20- 10- 5.
- FT4DCL4: are not available in 10- 5.

Each filter belonging to AZUD HELIX AUTOMATIC FT4DCL SW DLP SERIE contains two filtration elements.

DIN Flange: DIN 2576, ANSI Flange: ANSI B16.5 CLASS 150.

The designed flow rate per filtration element (Each filter belonging to **AZUD HELIX AUTOMATIC FT4DCL SW DLP SERIE** contains two filtration elements) depends on the **filtration degree** and the **quality of the water** to be treated (See following table). In that case, the maximum flow rate for good water quality in each model is indicated depending on the filtration degree.

MAX. FLOW RATE OF THE EQUIPMENT AZUD HELIX AUTOMATIC FT4DCL SW DLP [m <sup>3</sup> /h]*								
MODEL	Filtration degree of the equipment MICRON							
	5	10	20	50	100	130	200	400
FT4DCL3/6 SW DLP	-	-	-	84	144	156	156	156
FT4DCL4/6 SW DLP	-	-	64	112	160	160	160	160
